

33. Leftmost Column with at Least a One A row-sorted binary matrix means that all elements are 0 or 1 and each row of the matrix is sorted in non-decreasing order. Given a row-sorted binary matrix `binaryMatrix`, return the index (0-indexed) of the leftmost column with a 1 in it. If such an index does not exist, return -1. You can't access the Binary Matrix directly. You may only access the matrix using a `BinaryMatrix` interface:

- `BinaryMatrix.get(row, col)` returns the element of the matrix at index (row, col) (0-indexed).
- `BinaryMatrix.dimensions()` returns the dimensions of the matrix as a list of 2 elements [rows, cols], which means the matrix is rows x cols.

Submissions making more than 1000 calls to `BinaryMatrix.get` will be judged Wrong Answer. Also, any solutions that attempt to circumvent the judge will result in disqualification. For custom testing purposes, the input will be the entire binary matrix `mat`. You will not have access to the binary matrix directly.

PROGRAM:

```
class BinaryMatrix:
```

```
    def __init__(self, matrix):
```

```
        self.matrix = matrix
```

```
    def get(self, row: int, col: int) -> int:
```

```
        return self.matrix[row][col]
```

```
    def dimensions(self) -> list:
```

```
        return [len(self.matrix), len(self.matrix[0])]
```

```
def leftMostColumnWithOne(binaryMatrix: 'BinaryMatrix') -> int:
```

```
    rows, cols = binaryMatrix.dimensions()
```

```
    current_row = 0
```

```
    current_col = cols - 1
```

```
    leftmost_col = -1
```

```
    while current_row < rows and current_col >= 0:
```

```
        if binaryMatrix.get(current_row, current_col) == 1:
```

```
        leftmost_col = current_col
        current_col -= 1
    else:
        current_row += 1
    return leftmost_col
mat = [[0, 0], [1,1]]
binaryMatrix = BinaryMatrix(mat)
result = leftMostColumnWithOne(binaryMatrix)
print(result)
```

OUTPUT:

```
PS C:\Users\chall\OneDrive\Desktop\DAA> & C:/Users/chall/AppData/Local/Programs/Python/Python312/python.exe
"
0
PS C:\Users\chall\OneDrive\Desktop\DAA> █
```

TIME COMPLEXITY:

Time complexity for the above code is

$F(n)=O(\text{rows}+\text{cols})$
